

DubzChain Phase 6.4 - Frozen Network Constants

This document defines the fixed public testnet constants for DubzChain. Once the public testnet is live, these values should be treated as frozen unless an intentional reset or incompatible network relaunch is planned.

Constant	Value
chainId	dubzchain-devnet
protocolVersion	1
networkMagic	0xd00b2c01
maxSupply	33000000
halvingInterval	515625
initialReward	33
coinbaseMaturity	20
targetBlockTimeMs	21000
difficultyWindow	120
minDifficulty	2
maxDifficulty	3
addressFormat	dubz_ + sha256(pubkey).slice(0,12)
genesis policy	Deterministic genesis required

Freeze rule

- Do not change chainId once the public testnet is live.
- Do not change networkMagic once the public testnet is live.
- Do not change genesis rules without a planned reset or incompatible rollout.
- Do not change reward schedule values silently.
- Do not change coinbase maturity silently.
- Do not change difficulty rules silently.

Operator note

These constants should be referenced by the operator guide, launch recipes, and seed-node deployment guide. If any of these values ever change, operators should treat that as a controlled network event rather than a routine update.

Phase 6.4 completion note

Once this file is saved as the official reference for public testnet constants, you can mark 6.4 frozen network constants complete.
